

Technical reference guide for static compilation, data flows, pair programming governance, and CI/CD operations.

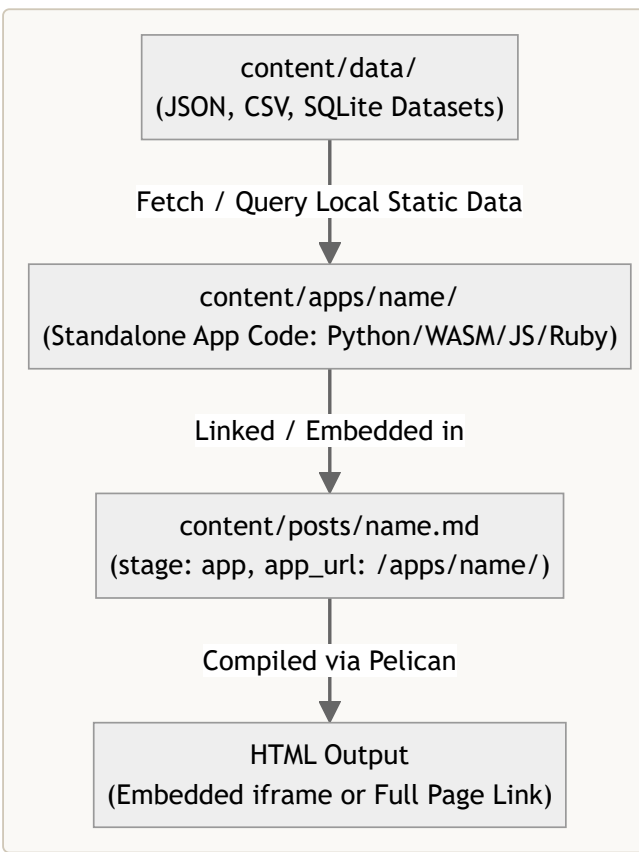

1. End-to-End Publishing Pipeline

2. Repository & Source Topography

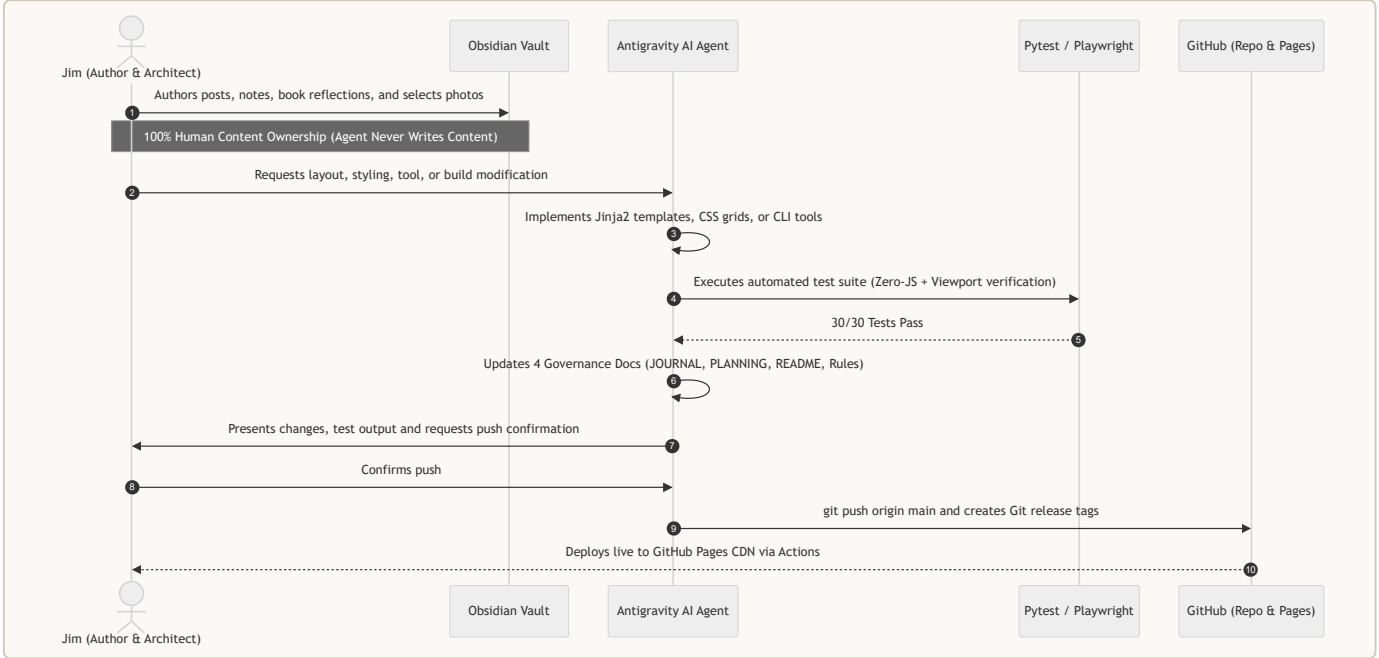

3. Interactive Apps & Static Data Architecture

Every app is paired with a companion post (`stage: app`) documenting its architecture, rationale, and evolution.

4. Antigravity AI Pair Programming Governance & Boundaries

5. Core Document Governance Matrix

Document	Role & Primary Purpose	Update Trigger
README.md	Architecture overview, CLI guide & component lexicon.	New tools, syntax, or commands.
PLANNING.md	Active sprint tasks, near-term milestones & statuses.	Every milestone completion.
ROADMAP.md	Long-term creative sandbox, wishlists & concept specs.	New exploratory concepts.
JOURNAL.md	Chronological technical decision log & troubleshooting.	Every commit / session.

6. Essential CLI Command Quick-Reference

```
# 1. Dependency Sync
uv sync

# 2. Build Pelican Static Site
uv run pelican content -s pelicanconf.py -o output -d

# 3. Local Development Preview Server
uv run pelican --listen -p 8000

# 4. Run Full Test Suite (Accessibility + E2E + Playwright)
uv run pytest -v

# 5. Generate Multi-Resolution Screenshots (8 Viewports)
uv run python tools/screenshots.py --page index.html

# 6. Granular Versioning Scheme
v0.5.01 -> v0.5.02 (Features) | v0.5.01.01 -> v0.5.01.02 (Fixes)
```
